Product Knowledge
Restor-A-Finish®

Scratch Cover — **Restor-A-Finish** — **Refinisher** — Stripper

Restor-A-Finish fills a void in your Wood Care Products line. It closes the gap between basic scratch cover products and refinishing products.

- Restor-A-Finish permanently restores the existing varnish, lacquer, or shellac finish without removing it.
- Restor-A-Finish penetrates stain through the existing finish to restore the color and luster.
- Restor-A-Finish restores any shade of the nine available colors.
- Restor-A-Finish should be used to restore blemishes of most wood finishes.
- Restor-A-Finish will not penetrate a polyurethane finish.
- Restor-A-Finish *restores* the finish.

- A refinisher dissolves and removes the existing varnish, lacquer, or shellac finish.
- After the finish is removed with a refinisher, the wood needs to be conditioned and a new finish (like tung oil) needs to be applied.
- A refinisher does not restore the color.
- A refinisher should be used to remove a wood finish that is so severely damaged that it cannot be restored.
- A refinisher will not work with polyurethane finishes.
- A refinisher *removes* the finish.
